<p>Deryagin, V. D. and Levi, S. M. KINETIC WETTING IN COATING AND THE METHOD OF ITS MEASUREMENT. [1960] 8p. 8 refs. M1962. Order from LC or SLA mi\$1.80, ph\$1.80 61-13343</p> <p>Trans. of Zhurnal Nauchnoy i Tekhnicheskoy Fotografii i Kinematografii (USSR) 1956, v. 1, p. 354-358.</p> <p>The action of wetting agents on coating is determined by their kinetic adsorption in the zone of contact between the emulsion and the base. Wetting agents exhibiting good wetting properties are characterized by a larger value of <math>\Delta</math> and <math>y_{10}</math>; with a decrease in these values the wetting properties are diminished. The anti-comet action of a wetting agent depends on the structure of the polar groups and the length of the hydrocarbon radical, while the anion-active substances (101, 102, and 103) show better anti-comet activities; from which it must be noted that a direct connexion is not observed between kinetic adsorption and anti-comet activity.
